Executive Summary

Defining the Problem

We believe that school should not feel like a constant struggle to stay afloat, and students should thrive academically and socially.

Narrowing the Focus

Students with ADHD often struggle to pay attention while studying for classes, and their academic performance and social life suffer as a result.

Creating a Solution

These students need a tool that helps them study, so they stay on top of their academics and effectively manage their time to include social activities.

Narrowing the Focus

User Persona: College students who struggle with ADHD, have yet to pick a major, and have a hard time engaging with their classes.

Users' Pain Points:

Focus

Difficulty with dense content, slow pacing, or information overload.

Productivity

Overwhelmed by heavy schedules and strict deadlines.

Procrastination

Low starting motivation; inaccurate time-estimation.

Validating Our Problem

From interviews¹ with 15 students with ADHD:

About the Current Options

- “I have a hard time doing readings for class.. because I start to fall asleep.”
- “The effort seems both intense and meaningless.”
- “My focus drifts and I read the info without getting anything out of it”
- “My eyes feel like they are revolting.”

Other Evidence²

- Rather than being driven by goals, those with ADHD are wired to respond to interest, novelty, change, and urgency.
- Motivation is driven by dopamine release due to high-stimulation.
- Information that is presented in a static way fails to release dopamine, leading to inability to start a task until it becomes urgent.

1. Quotes from group-run survey of BYU students with ADHD

2. <https://edgefoundation.org/making-the-adhd-interest-based-nervous-system-work-for-you/>

The Solution: teachMe

Reformat study material into a more engaging and easily digestible format to relieve the pressure students with ADHD face.

Simplify Large Sets of Information

Break up large readings and long lectures into short bursts of information to facilitate a more straightforward learning process.

Engaging UI

Create a clean, customizable user experience to fit different student needs and preferences.

Summarize Key Takeaways

Help students retain information in the long-term by presenting key definitions and principles.

MVP & DEMO

Solution Development & AI Workflow

Ideation:

- **Process:** Team-led brainstorming informed by real student data.
- **AI Integrations:** Used **Gemini** and **Chat** to simulate our defined users, to stress test our ideas.

Design:

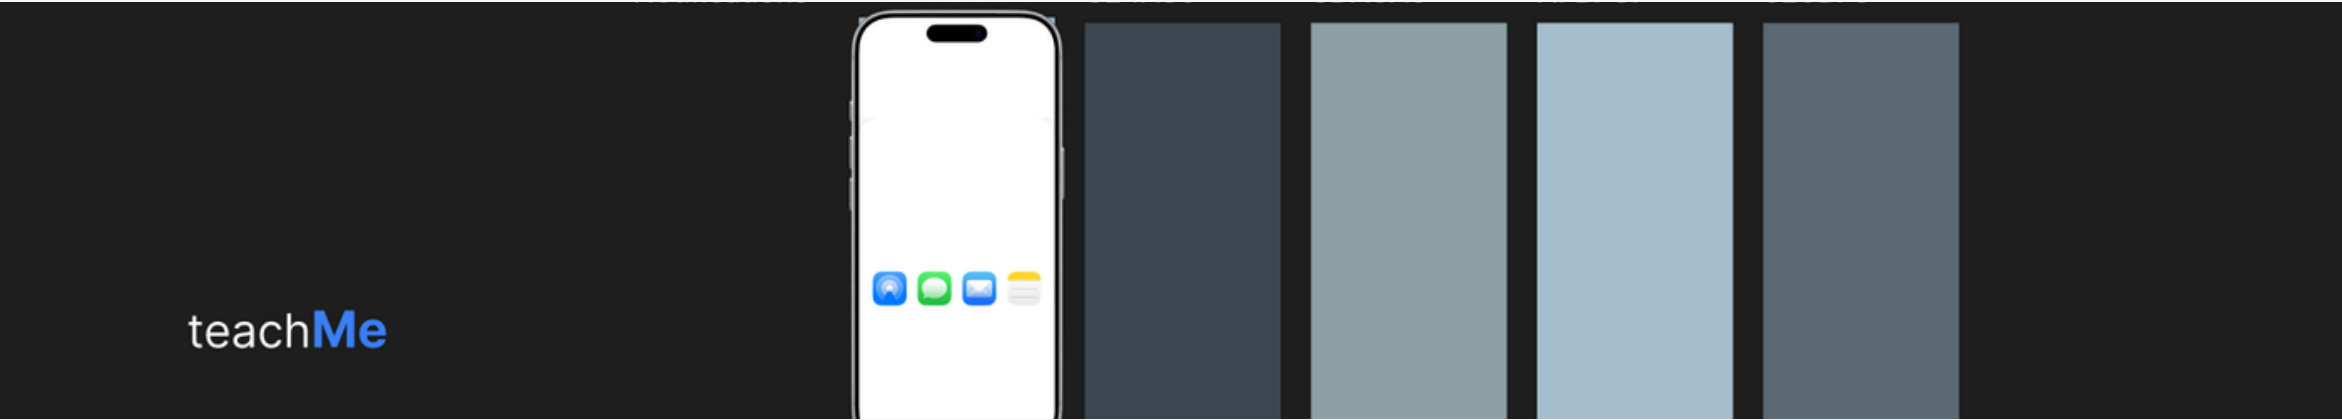

- **Process:** Started with our initial product goals and wireframed in **Figma**.
- **AI Integrations:** Uploaded world-class prebuilt UX interfaces to **Claude** for replication.

Prototype

- **Process:** Created and refined our Product Requirements Document (PRD).
- **AI Integrations:** Utilized **Cursor**, **VS Code**, and **Claude** to develop the frontend and backend, building a functional product.

Casey umm did anyone else get this text? It's just random letters lol

Riley yeah same, literally just 'b'ghnmjhgiv' - not sure what we're supposed to study here

Morgan wait is this a typo or am i missing something??

Casey ngi i think the text didn't load properly or something

Riley yeah there's no actual content to analyze here, just gibberish

Morgan ok so basically we can't really make a study convo out of random characters right

Got it Can you explain that? What's the main point? Give me a real-world example

Ask a question or dive deeper... Send

User Feedback

From contextual interviews¹ with 5 students:

Feedback

- “People need to engage in the learning process to really retain anything long-term.”
- “Having more options than text would really help me digest the information better.”
- “I sometimes need to take notes for classes, so having a summary of key definitions and principles would help me know what I need to look out for.”

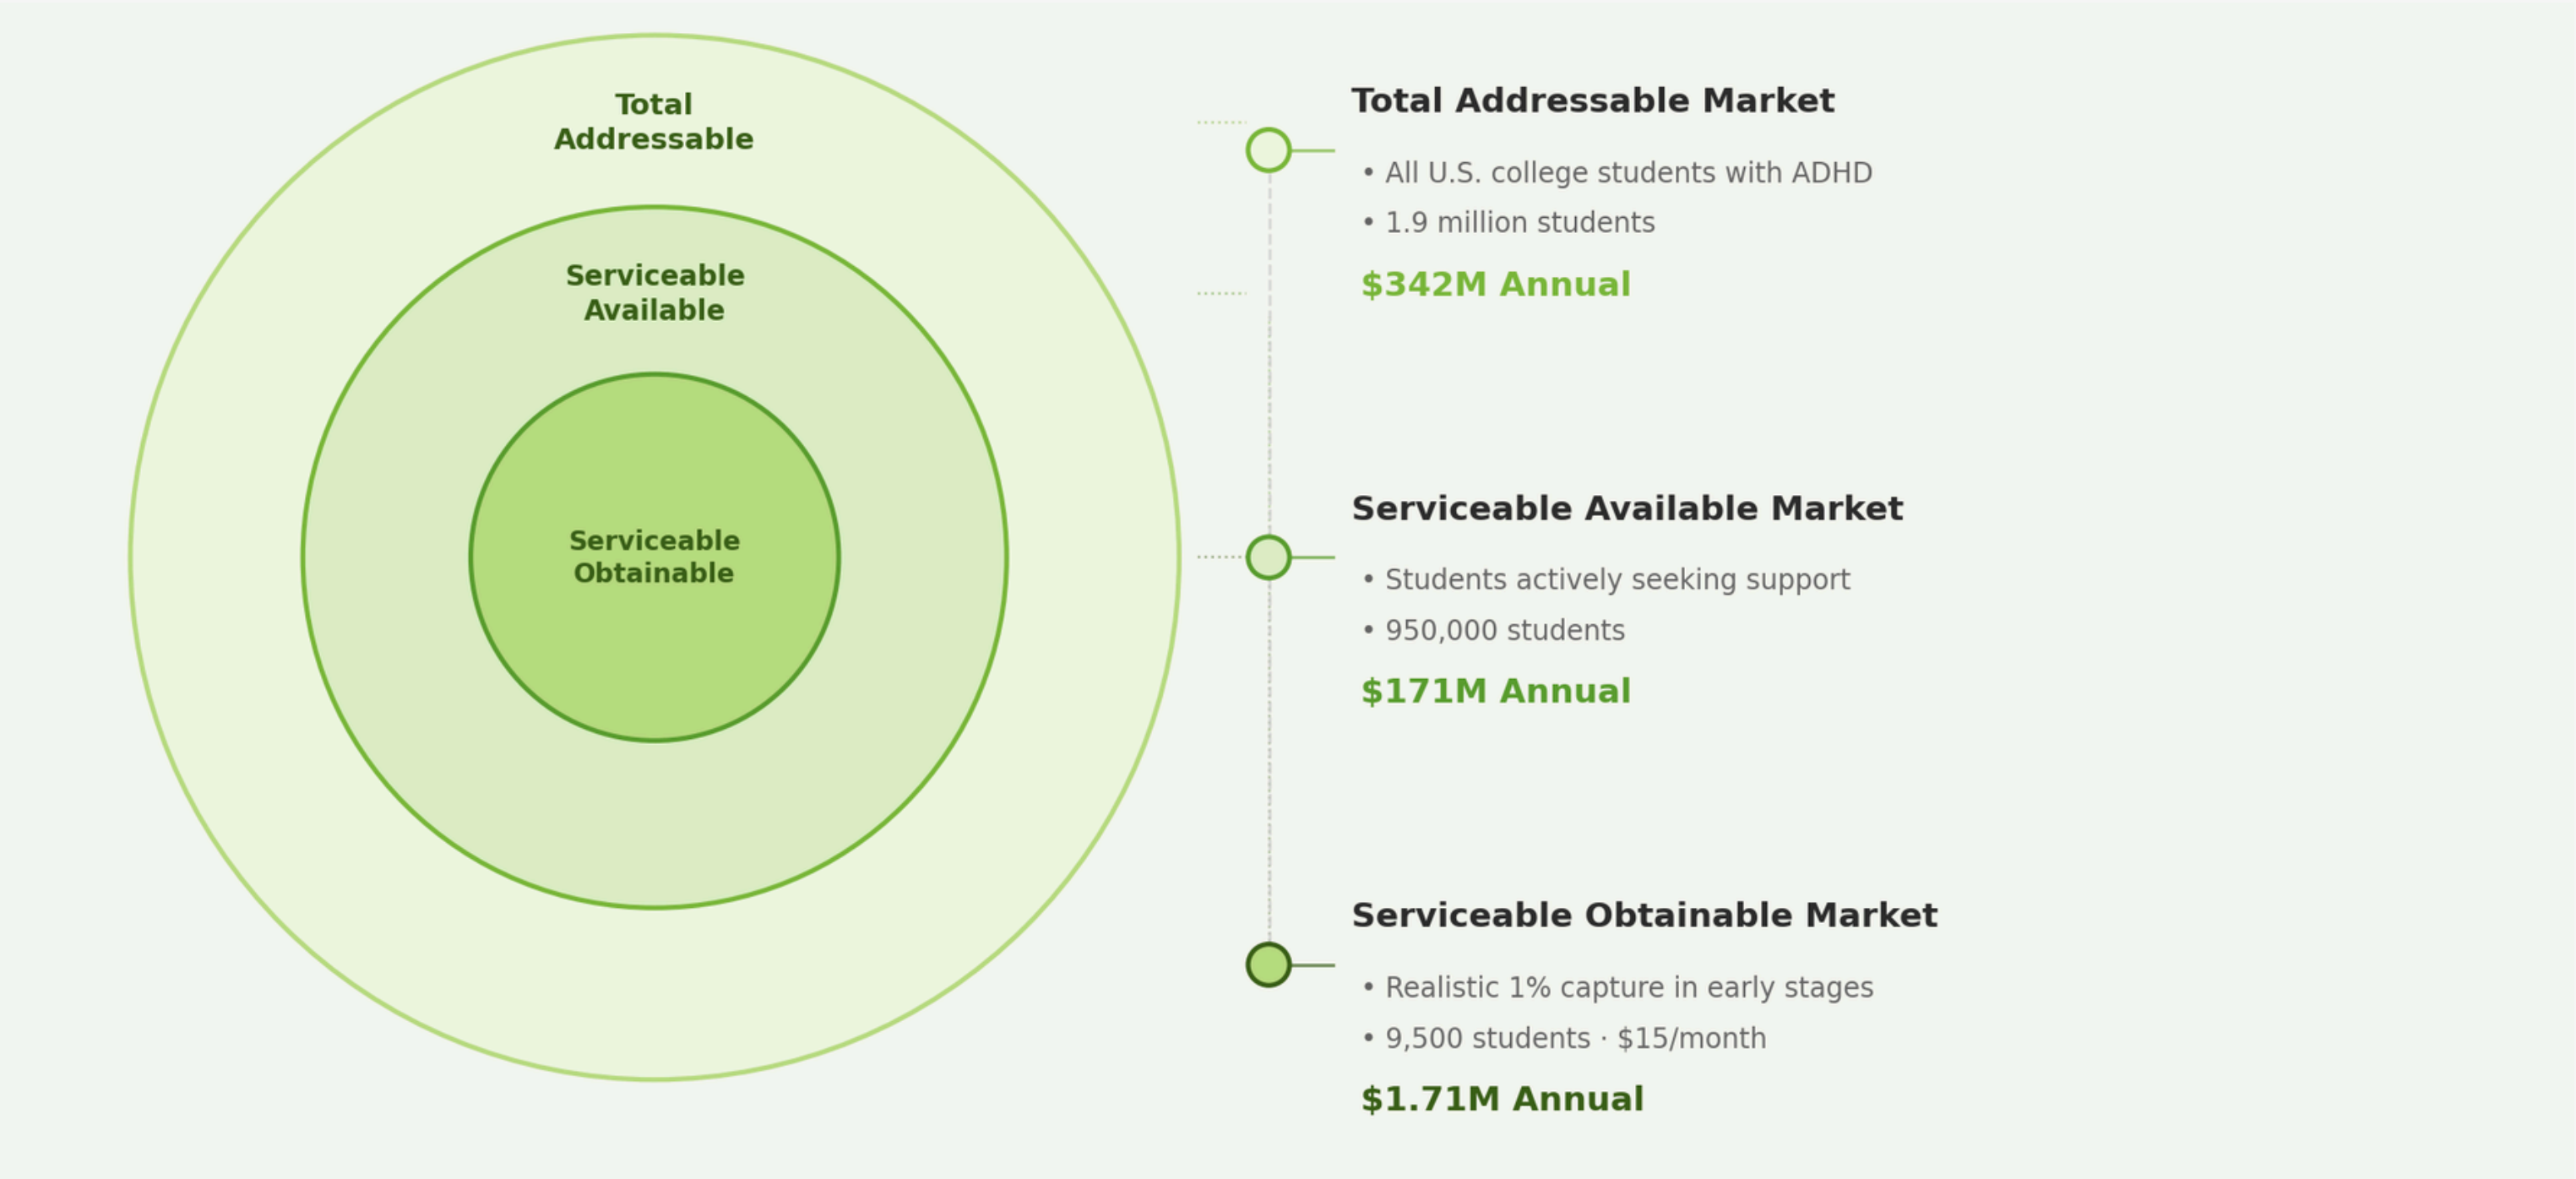

Iterations & Changes

- Allowed users to stop the process and insert their own thoughts to check for understanding.
- Expanded the selection of the learning modes.
- Integrated a summary of key principles and definitions in addition to regular features.

1. Quotes from in-person user tests with BYU students

Market Opportunity

US College Students with ADHD

Roadmap

Based on student feedback,
our next priorities are:

- **Customization:** UI adjustments for diverse learning styles.
 - Accommodate: anxiety, the avg. adult, etc.
- **Automated Lectures:** real-time recording and transcript generation.
- **Visual Inputs:** ability to upload and reformat PowerPoints and visual files.

Other elements to build:

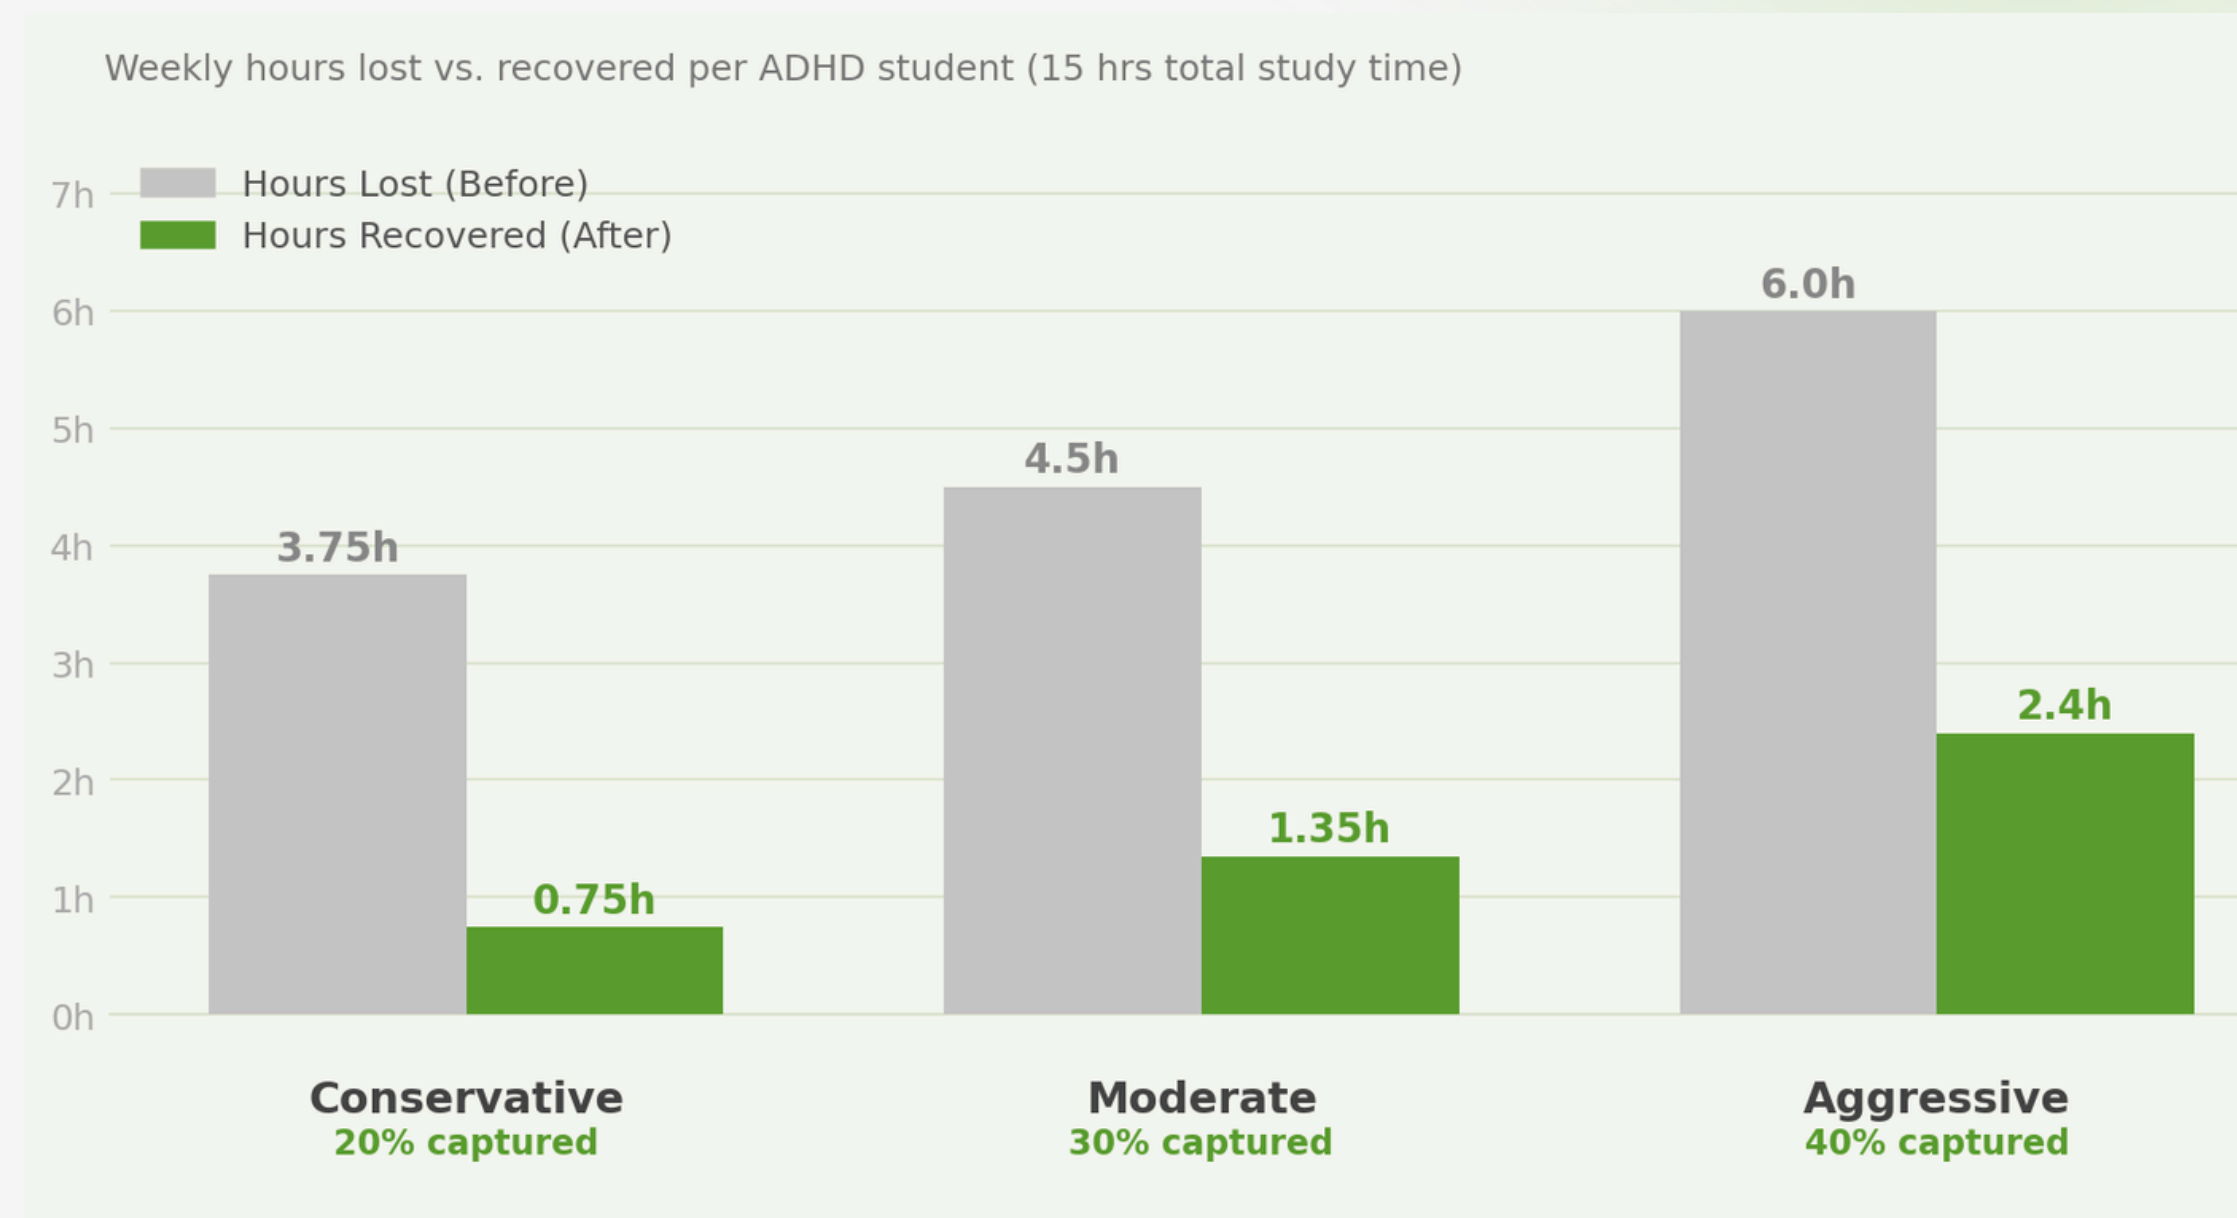

- **Pay Wall:** ability to have a monthly subscription.
- **Retention Rate Tracking:** % of students returning after 2 weeks.
- **Confidence Score Survey:** pre/post-study survey on academic confidence.

Impact

“School should not feel like a constant struggle to stay afloat...”

From Surviving to Thriving

- **Reduced Cognitive Load:**
Shorter sessions that stop the "relearning at home" cycle
- **Dopamine-Driven Engagement:**
Comprehension that matches the ADHD brain's interest-based wiring
- **Emotional Resilience:** Less burnout, more mental energy for life outside school

Thank You

- Burnout

Timestamp	What are your biggest issues with dealing with ADHD/Anxiety in school?	How often do you find it difficult to digest information, and why?	What ways do you consume information the best?
2/12/2026 0:28:48	My biggest issue with dealing with anxiety in school are mainly during exams and tests. They are inaccurate representations of how well students are truly learning. My anxiety is high during tests no matter what I have tried. I think that is one of the hardest parts about having anxiety in school.	At least once a week, I have a day where focusing is hard. Usually it doesn't last for long, but it makes it challenging to focus on my work.	Podcasts/Audio
2/11/2026 23:18:08	I'm not diagnosed with anxiety and it's probably not like super severe but I do get anxious a lot and stressed out easily. Trying to manage school, work, my church calling, and somewhat of dating has had my mind filled with being overwhelmed. I keep thinking that this is so much, I'm never going to be enough, I should have joy but my thoughts are just racing and sometimes I feel like I can't breathe. Some days I just want to sit on my bed and not do anything or just scroll mindlessly. I overthink a lot and when I go to therapy I cry it all out of the things I talk about. I internalize everything, and I have a hard time focusing in school and feel so exhausted all the time.	Sometimes, and I feel like it depends on what class and how much I enjoy it. My psychology classes feel like a lot and I don't know how well I'm taking in information from class because my mind wants to think about a lot of things and a lot of times I just keep looking at time wanting it to pass by quickly. I anxiously wait for class to end and to get out of lectures. I don't remember a lot about what is said. I have to write things down and type notes for me to be somewhat engaged.	Writing down notes in my journal, visuals with explanat
2/11/2026 12:51:39	Being able to manage all the work load, managing perfectionism	Not often. If in zone out yes or feeling anxious but most of the time I can.	Mindmaps, Podcasts/Audio
2/11/2026 20:33:42	Remembering information after the assignment is over.	I zone out in class, and I find it difficult to study. At least 3 or 4 classes. Sometimes I feel like I important information because I didn't understand whT was said or the teacher skipped a step he thought everyone would already know.	Conversational Text, Physically or application. Doing a
2/11/2026 21:44:55	-Both work together to cause procrastination -Trying to work on assignments sometimes feels painful -Tests are stressful no matter how smart you are because your studying is inconsistent	If I'm not interested in a subject, or something else interests me more, I find it very hard to digest information, because the effort seems to be both intense and meaningless. Fortunately most of school is interesting enough.	Conversational Text
2/11/2026 22:57:24	The inability to start tasks, procrastination, and stressing over unimportant stuff	Digesting information has never been a problem, it's just getting myself to want to.	Podcasts/Audio, Conversational Text
2/11/2026 23:06:35	I unintentionally zone out in class almost daily, and it feels almost impossible to study intently and focus unless it is a subject that I am truly interested in	Everyday cause if my brain just fills itself with other thoughts and ideas if the topic of discussion is not interesting even when I try to focus.	Podcasts/Audio
2/12/2026 7:38:44	finding the motivation and will to do anything.	pretty often, because i can't pay attention or can't be bothered	forcibly put it in my mind
2/12/2026 8:44:29	It's hard to sit still listening to unengaging topics and still pay attention	Sometimes it's hard to digest overly dense information with a lot of stats	Conversational Text
2/12/2026 10:44:44	I procrastinate a lot because I don't want to get things wrong/doing homework and studying stresses me out, so it just compounds.	Semi often. I have a hard time doing readings for classes partially because I start to fall asleep when I read and partially because there's so much and it's overwhelming	Podcasts/Audio, Conversational Text, I don't really kno
2/11/2026 23:16:35	I feel like for me, my ADHD is a big cause for my anxiety haha. It's hard to focus in class, so I usually am pretty zoned out (unless it's an interesting class!) and then have to relearn everything at home. It's also rough trying to remember to do all my homework and there are definitely some close calls for when I remember to do my homework to when the deadline is... I think another challenge for me is if the class is too fast paced, it can feel overwhelming and then it feels like my mind shuts down and I forget just about everything that was just taught!	I find it difficult to digest information when someone is talking at me (like during lectures). I've found the more engaged I am in lessons by participating or doing activities, the easier I can retain the information. Also I can remember more information when people use stories to make it more interesting. Once I'm locked in, I'm locked in. Just getting to the point of locking in is the problem lol	Mindmaps
2/12/2026 7:26:41	As a person with less disruptive ADHD I can normally make it through 1 class while paying attention and locked in but if it's required of me to be locked in in my next class without a break it becomes hard for me not to retreat into my mind	A couple times a day. My eyes feel like I they are revolting and are choosing not to read and want to do something else	Podcasts/Audio
2/11/2026 20:15:19	I used to doom-scroll to try and cope with my anxiety, which wastes a lot of valuable work-time, and severely decreases motivation to study. Productivity in general is really hard if I'm not regulating my anxiety. ADHD was hard in high school because I struggled to pay attention in class and would miss important info that I would have to relearn later by myself. I also had terrible procrastination which fed into anxiety because I cared about my grades a lots, so i often ended up doing homework at 1 am the night before. Thankfully, I've overcome those specific ADHD issues.	Often. You could say I'm more of a "doer" than a "consumer". Sitting down and reading/digesting info can be a bit hard for me, I typically prefer doing things that require physical action. Why? Because my brain likes to see physical progress, such as a completed assignment, washed dishes, etc. The progress made from reading a book is mental not physical, and it's just harder for me to find motivation without those physical milestones of progression.	Mindmaps, Podcasts/Audio, Spaced-Repetition note-ta
2/12/2026 12:12:14	The overwhelm of constant readings, assignments, and tests as well as having to keep up a social life and take care of myself, which leads to constant burnout.	Often, it is hard to digest a lot of information from several different places when your mind goes a million miles an hour.	Podcasts/Audio, Just talking it out

User Feedback

Active Comprehension

- 1. Key Extraction: Sidebar for definitions and core principles.*
- 2. Content Chunking: Long text converted into digestible "main idea" blocks.*
- 3. Interactive Learning: AI-driven quizzes and check-for-understanding dialogue.*
- 4. Visual Mapping: Auto-generated mind maps and spatial diagrams.*

Enhanced Literacy Tools

- 1. Audio RSVP: TTS integration for simultaneous listening and visual tracking.*
- 2. Dynamic Bionic Reading: Real-time bolding synced with audio playback.*
- 3. Educational Onboarding: Tooltips to explain RSVP and Bionic Reading utility.*

Multimodal Accessibility

- 1. Podcast Generation: One-click text-to-podcast for mobile learning.*
- 2. Voice-to-Text: Streamlined voice input for hands-free interaction.*
